Type: ROUTINE INSPECTION

Date: May-04-2010

PURDY, MO 65734

3.9 (b)

FEEDING.

Sec. 3.9 Feeding. (b) Feeding pans must either be made of a durable material that can be easily cleaned and sanitized or be disposable. If self-feeders are used, they must be kept clean and must be sanitized in accordance with Sec. 3.11(b) of this subpart.

-There were at least 2 metal self feeders in the outdoor pens for the big dogs that were rusty. The flaps covering the openings are dark and appear rusty. The other metal feeders were in better condition. The licensee must clean and repair these feeders and check all of the other feeders for rust and damage. Rusty and roughened surfaces can easily trap dirt and debris and cannot be easily cleaned and sanitized.

This affected at least 4 adult dogs

To be corrected by May 11, 2010

3.11 (d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control. (d) Pest control. An effective program for the control of insects, external parasites affecting dogs and cats, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

-There were large amounts of flies throughout the exterior of the facility. There were flies around the red building exterior, the outdoor runs, the exterior of the whelping building, and the adult building. There was no fly control in place at this time. The licensee must have effective fly control in place at all times throughout the facility to reduce and control the fly population. Flies and other pests can spread disease to the animals.

This affected all dogs

To be corrected by May 11, 2010

Inspection Report

This inspection and exit briefing was conducted by Jan Feldman - ACI and the licensee. The licensee was informed that the report would be sent by email due to printer problems.

Time of inspection: 8:55 am

- The licensee removed wood dog houses and has replaced them with dogloos
- The dogs and puppies are in large enough pen

-The licensee is currently consulting with the attending veterinarian on the Boston Terriers and the weight loss/gain problems.

3.4 (c)

OUTDOOR HOUSING FACILITIES.

Sec. 3.4 Outdoor housing facilities. (c) Construction. Building surfaces in contact with animals in outdoor housing facilities must be impervious to moisture. All surfaces must be maintained on a regular basis. Surfaces of outdoor housing facilities--including houses, dens, etc.--that cannot be readily cleaned and sanitized, must be replaced when worn or soiled.

-There were at least three wooden dog houses in the outdoor pens that show signs of wear. The dogs have chewed in the interior doorways and frames which are exposing raw unsealed wood. This wood cannot be easily cleaned and disinfected. It must be removed or repaired to allow for ease of cleaning.

This affected 6 adult dogs

To be corrected by May 7, 2009

3.6 (c) (1) (iii)

PRIMARY ENCLOSURES.

Sec. 3.6 Primary enclosures. (c) Additional requirements for dogs--(1) Space. (iii) The interior height of a primary enclosure must be at least 6 inches higher than the head of the tallest dog in the enclosure when it is in a normal standing position:

-There were two small pens in the whelping building with larger puppies. There was one pen with two golden juveniles and one pen with two mastiff juveniles. The licensee had them inside because it was cold overnight. The puppies were too tall for the pens that they were in. The tops of the puppies' heads were touching the top of the pens. The licensee must ensure that all animals in pens with tops have no less than 6 inches of headroom at all times - even in temporary holding areas.

This affected 4 juvenile dogs

To be corrected by April 8, 2009

Inspection Report

This inspection was conducted by Jan Feldman - ACI and the licensee.

Time of inspection: 8:45 am

- The ventilation in the big building is better
- The interior of the small building is better - the licensee did not replace the floor yet but it is clean

3.1 (c) (3)

HOUSING FACILITIES, GENERAL.

Sec. 3.1 Housing facilities, general.(c) Surfaces(3) Cleaning. All other surfaces of housing facilities must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices. Sanitization may be done using any of the methods provided in Sec. 3.11(b)(3) for primary enclosures.

-The interior of the sheltered building has become dirty and gunky. The licensee is in the process of replacing the floor in the hallway. The walls, ceiling, and other surfaces not in the pens have a build up of dirt. The licensee must clean and sanitized the interior of the building, the exterior of the feeders, and all other surfaces of the interior of the building to satisfy generally accepted husbandry standards and practices

This affected 71 adult dogs

To be corrected by May 13, 2008

3.2 (b)

INDOOR HOUSING FACILITIES.

Sec. 3.2 Indoor housing facilities.(b) Ventilation. Indoor housing facilities for dogs and cats must be sufficiently ventilated at all times when dogs or cats are present to provide for their health and well-being, and to minimize odors, drafts, ammonia levels, and moisture condensation.

-The licensee has a new large indoor building. It has a ventilation system. The system was on, but there was still a strong odor of waste in the middle of the building. The licensee must have the system checked out and ensure that it is functioning properly. The building has not been cleaned yet this morning and it is very humid outside today so the odor is at its' potential worst. The odor could cause potential respiratory problems for the animals. The licensee must improve the ventilation to prevent any potential for respiratory problems in the dogs.

This affected 135 adult dogs

To be corrected by June 6, 2008
